KEY NEWS Last update: Sept 02. Since then, the actual 'values' of chemical agent health standards/guidelines listed in the attached "Summary Tables" have not changed -- was HAS changed is the 'status' of some of the air values and their references. In addition, updates of related policies and regulations with significant new procedural changes (monitoring, medical surveillance, personnel decon) have occurred that may be of interest to some (see 'NEW POLICY..., below). The only changes to attached Tables are references and some /notes' - these are highlighted in yellow. As always - please note that the Tables themselves should not be used as a source reference - instead use the cited source documents (I can provide you with requested references). As usual - I note that these Tables are best viewed/printed in COLOR.

<< File: CWA-AirTable 4-5-03.doc >> << File: CWA-mediaTable3-19-01.doc >>

Acute Exposure Guideline Levels (AEGLs): The official documentation of the final AEGLs for Sulfur Mustard and Nerve Agents (GA, GB, GD, GF, and VX) - has recently been made available by the National Research Council (NRC) as an advance pre-publication copy of the *NRC Volume* 3 - Acute Exposure Guidelines Levels for Selected Airborne Chemicals was released on 14 March 03. The final print edition is to be available in May 03 from the National Academy Press (www.nap.edu), and viewable pdf version should be available from this website in April 03. These guidelines - also developed for toxic industrial chemicals - are for one-time exposures to address catastrophic releases (accidents or WMD event) and are of great interest for a variety of current issues - particularly Homeland Defense and the Army-FEMA joint Chemical Stockpile Emergency Preparedness Program (CSEPP).

Airborne Exposure Limits (AELs): AELs for CWA include the IDLH values, worker Short-Term Exposure Limits (STELs), 8-hr TWA ("TLV-type) Worker Exposure Limits (WPLs), and chronic daily lifetime General Population Limits (GPLs). Over the past few years, the Army Surgeon General had supported efforts to re-evaluate existing AELs and determine whether changes were needed. The past several Updates and Tables have included the recommended changes & new proposed values (i.e. STELs had not been established prior these recent evaluations). However, these changes/new values had yet to be officially incorporated into regulation or policy. The Army has now incorporated the changes and new values - with associated new procedures (e.g. monitoring, use of STEL) in a revision of the Dept of Army (DA) Pamphlets (DA 40-8 and DA 40-173) which officially establish the newest AELs (and document the basis for their derivation). The draft revisions are still undergoing official staffing until 14 April 03). Presumably by later in FY 03, pending comments, changes will be finalized.

<u>NEW/CHANGE POLICY REGULATION: if</u> interested in copies of any of the documents referred to below - just let me know, for most I have electronic).

- The Army and FEMA finalized a joint policy paper (CSEPP Policy Paper #20) re: AEGL policy for CSEPP in Feb 03.
- In additional to changes in AELs, the revised (currently under staffing) DA Pams 40-8 and 40-173 described above also recommend substantial procedural changes to include: a) **new personnel decontamination procedures** -warm water and soap NOT dilute hypochlorite/bleach as has historically recommended); b) **new/modified medical surveillance procedures and procedures for documenting exposures**; c) **new record keeping, health ed/haz com, respiratory protection prgm procedures** per latest OSHA guidance.
- Guidance on Chemical Accident or Incident Response and Assistance (CAIRA) Operations (DA Pam 50-6) The implementing guidance in this Army pamphlet has recent been updated (26 March 2003) with significant additions and changes it especially provides new/expanded information relative to the application of this guidance to terrorist events and non-stockpile sites. Includes guidance/clarification on various organization roles and responsibilities for Army organizations in relation to non-DoD Federal, State agencies, and Regional Response Teams. Updates guidance on remedial actions, and environmental monitoring; and medical roles/procedures. Deletes guidance/info on IRF/SRF exercises, decon, CAIRA plans.

MORE STUFF:

Military CWA Air Guidelines:

Under re-evaluation. Per attached Table 1 - current re- evaluation of different sets of guidelines to be applied for military settings for various applications (Force Health Protection surveillance versus casualty estimation) is ongoing.

Establishment of Test Criteria for Permeation of Chemical Protective Clothing.

A report developed by Oak Ridge National Laboratories in conjunction with USACHPPM for a specific joint NIOSH/Army project describes percutaneous vapor toxicity criteria for use as testing specifications for commercial suits against selected CW agents.

Standards/Guidelines for other Media other than Air (water, soil, ...) [see Table 2]

Status has not changed for two years. However, it is noted that TB Med 577 is undergoing final stages of drafting and should be staffed by 3rd QTR 03. The values listed for CWA standards will not change.

<u>Additional useful info/tools:</u> USACHPPM has prepared some information papers 'Fact Sheets' that describe the various air standards and guidelines which are available on request.

ADDITIONALGENERAL INFO/ACCESS TO DOCUMENTS: Some of the referenced documents are available on the following website. Others will be added as they are finalized/made available. http://chppm-www.apgea.army.mil/hrarcp/pages/caw/index.html As usual, feel free to comment. And please let me know if there are problems with the website or other questions/additional information needs.

HIGHLIGHTED values indicate changes from previous version (Sep 11 02) of this Table 1

- () Numbers in parentheses are from draft documents
- GREEN Numbers in Green are currently documented in official Army regulation/policy and are no changes expected
- **BLUE** Numbers have been developed/endorsed by non-DoD federal proponents for Army and non-Army use
- **RED** Numbers are still officially used/endorsed by Army/other approving entity source **but** revisions are proposed/underway (see below)
- **BLACK** Numbers are final technical values but are not yet approved for official implementation by proponent agency
- *STEL is new proposed standard not previously established
- ** Lewisite values are all based on detection; no true IDLH exists (AR 385-61, Table 2-2, 2-3)
- PINK regarding ongoing CDC review of AELs and potential changes to "new" (in black) Army proposed values
